

A More Structured Approach to Low Vision

Led by Expertise in Low Vision Care

Low vision care is not one-size-fits-all. Many patients continue to struggle with daily tasks despite standard treatments or devices.

At Clarity Eye, our low vision program focuses on identifying usable vision and applying targeted strategies to improve function, independence, and quality of life.

We combine advanced diagnostics, rehabilitation strategies, and access to innovative treatments to support patients at every stage of care.

Dr. Maryam Taheri-Shirazi MD

General, Low Vision, Cataract & Refractive Surgeon

Dr. Taheri-Shirazi is a fellowship-trained, board-certified ophthalmologist with advanced training in Low Vision Rehabilitation from the University of Toronto.

She leads the Low Vision Program at Clarity Eye, focusing on personalized care, innovative treatments like Opti-K, and improving quality of life for patients with vision loss.

Improving vision. Supporting independence.

Low Vision Care at Clarity Eye

Personalized solutions designed to help you make the most of your vision.

What is Low Vision?

Low vision refers to vision loss that cannot be fully corrected with glasses, contact lenses, or standard surgery.

It can make everyday tasks more difficult, including:

- Reading and near work
- Recognizing faces
- Driving or navigating
- Maintaining independence

Common Causes:

- Age-related macular degeneration (AMD)
- Diabetic eye disease
- Glaucoma
- Other retinal or optic nerve conditions

A Personalized Approach

What We Offer:

- Comprehensive low vision assessment
- Personalized care plans
- Assistive solutions tailored to individual needs
- Ongoing support and follow-up

Low Vision Solutions:

- Specialized low vision devices
- Visual aids for reading and daily tasks

ESCHENBACH

Advanced Treatment Options

Opti-K™

A minimally invasive laser procedure designed to improve near vision and support patients with presbyopia, hyperopia, and age-related macular degeneration.

- Performed in seconds per eye
- No cutting or tissue removal
- Designed to improve functional vision

MacuMira

A non-invasive light therapy designed to support retinal health by stimulating cellular activity and reducing inflammation in patients with dry AMD.

Opti-K™

MacuMira
